GSW · first-order inferred passes

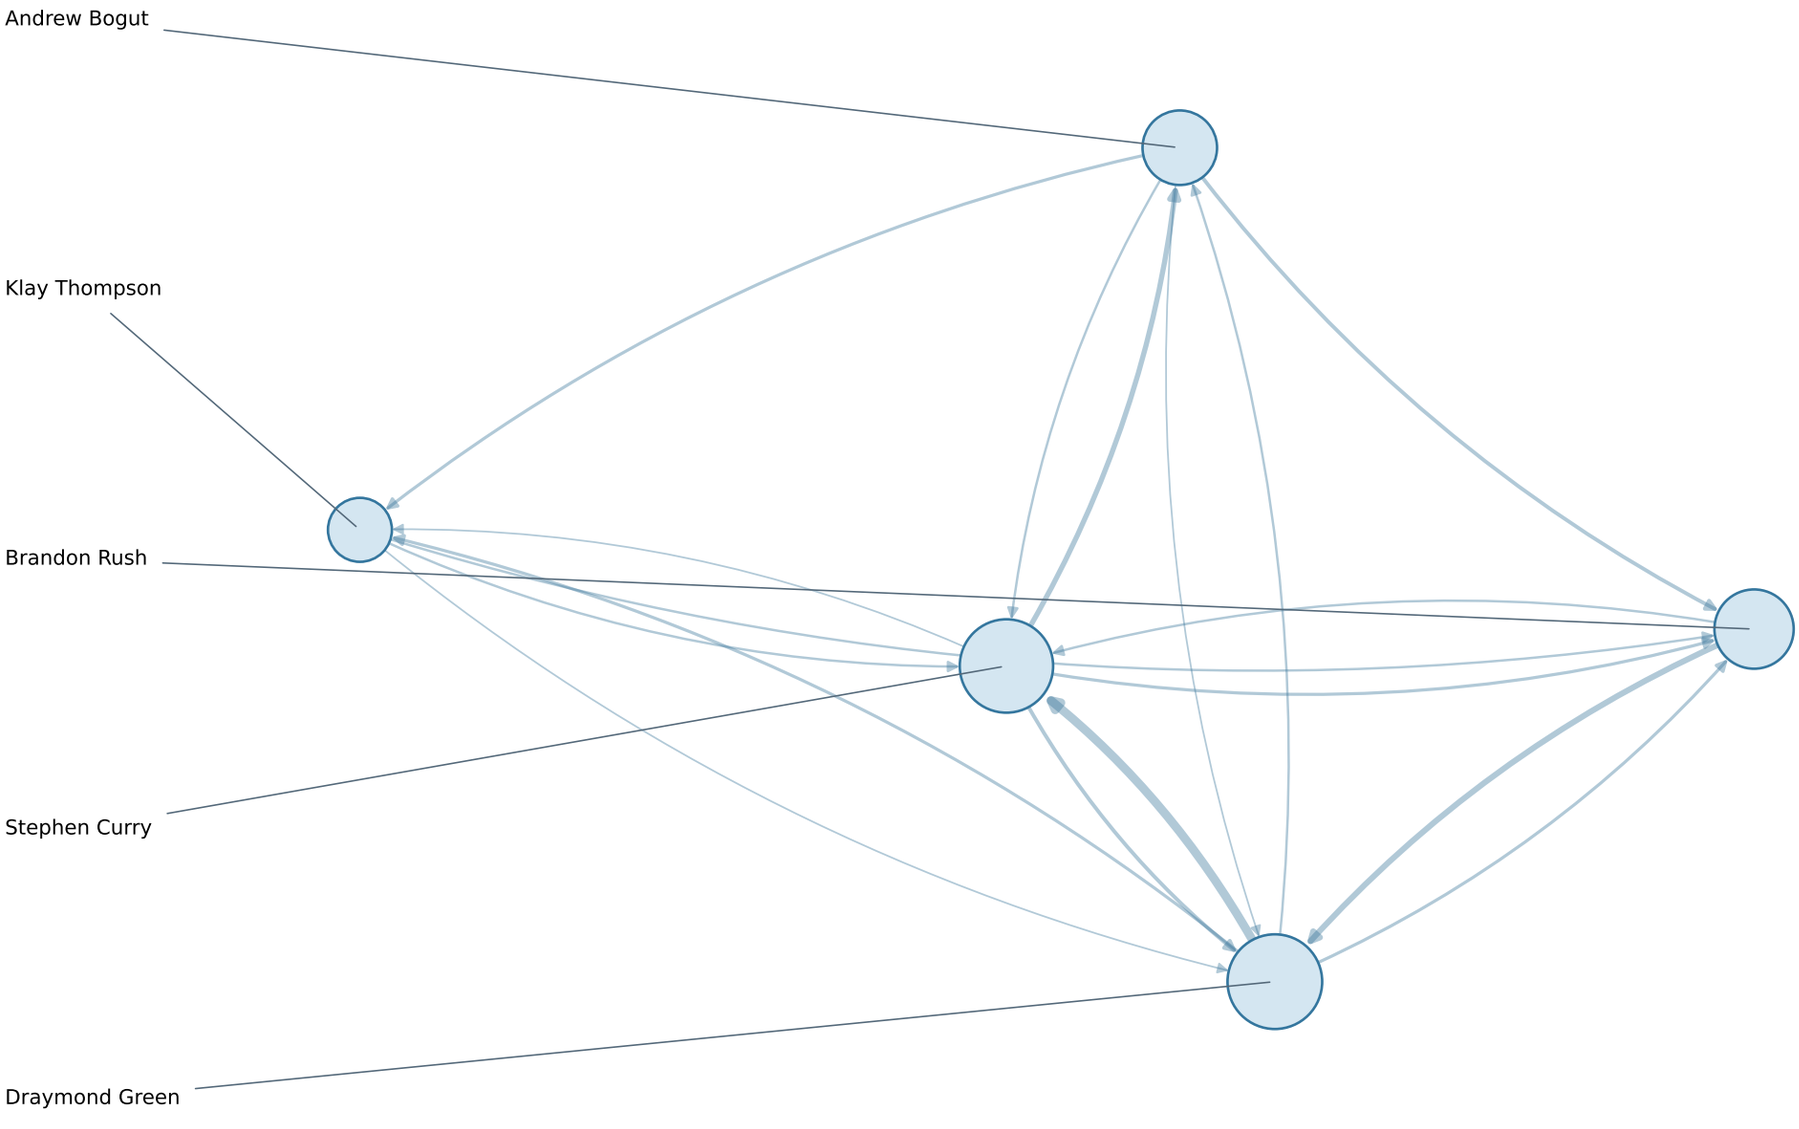

Second-order: previous→current pair states
Top14 active states shown; full matrices saved

Conservative inferred passes, not annotated events. Sequences stop at uncertain transfers, lineups, gaps and PBP boundaries.
Node size: pass/transition involvement. FR layout is aesthetic; missing outgoing probability rows remain undefined.

2016-01-04 · 57 inferred passes

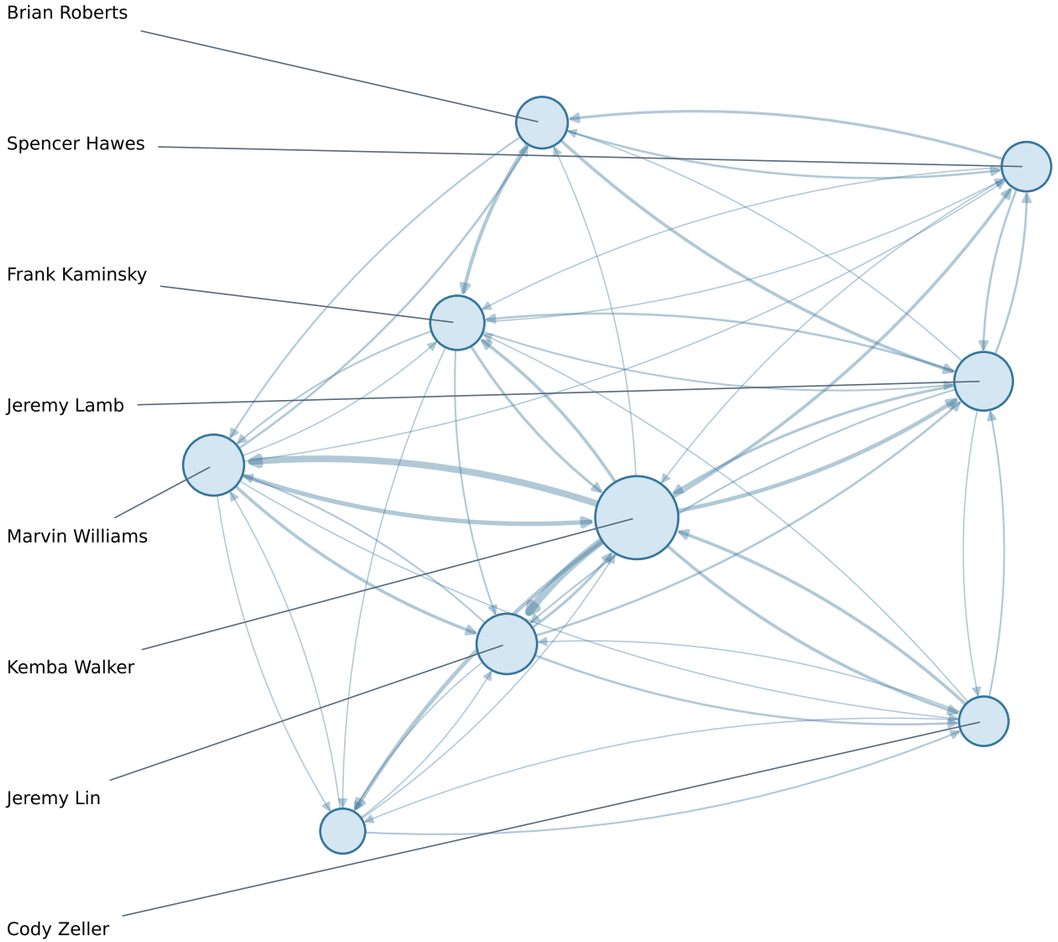

GSW · most-observed inferred-pass five-player lineup

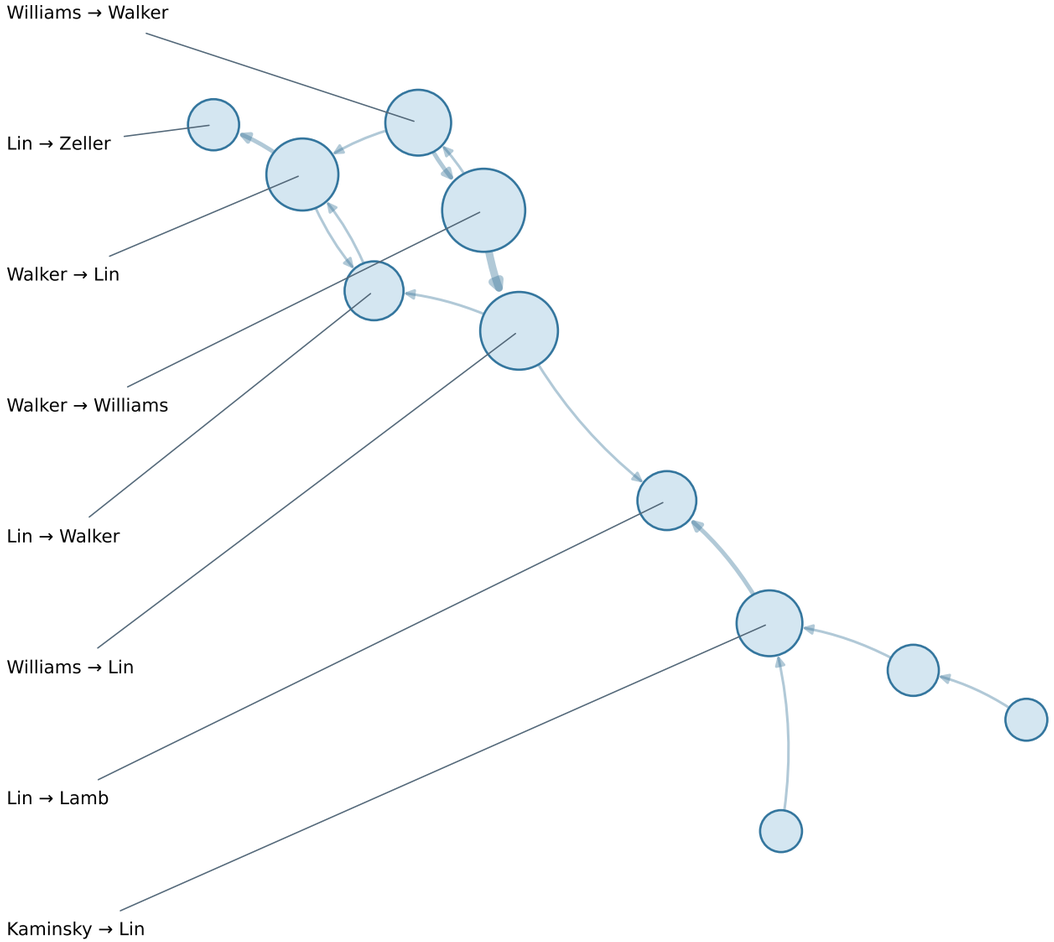

Same five teammates are tracked on court at both endpoints of every accepted pass; no substitution is crossed.
Counts cover eligible recorded live-clock periods only, not complete official lineup totals.
